

ALEDADE APP

— At A Glance —

The Aledade App, a population health tool, delivers actionable patient data and insights directly to the point of care so independent primary care practices, community health centers, and clinics can focus on what's most important: their patients.

Better data at the point of care

Most independent primary care practices don't have an in-house data integration team to ensure access to all the necessary information about each patient. The Aledade App delivers that data in a standardized, easy-to-use format. The App integrates data and insights from multiple sources into a single solution so primary care practitioners can view up-to-date data about patients at the point of care.

Customized care for patients

The Aledade App enables customized care not only for patients who walk through a practice's doors, but importantly, for patients who are not coming in despite their needs. The detailed, prioritized worklists highlight patients in need of intervention and display necessary information in a meaningful way so that the entire care team can collaborate around action items and care planning.

Optimize care delivery

The Aledade App empowers primary care physicians and their staff to focus on the patients who may benefit from enhanced management, maximize the impact of their limited resources, and support long-term financial sustainability for their practices.

Wellness Worklists

Prioritize high-risk patients in need of outreach for preventive care and connect them with complementary programs and services

Emergency Department (ED) Utilization

Identify and follow up quickly with patients who went to the ED

Transitional Care Management (TCM) Alerts

Prevent hospital readmissions with proactive, timely outreach to patients post-discharge

Daily Huddle

View patient care gaps, chronic conditions, specialist utilization, and hospital events in one place

Patient Drawer

Review timely, actionable data for improved decision-making at the point of care

Population Health Tool

Track and monitor quality performance, care delivery, and outcomes across patient populations

Data Imports

Integrate data from disparate sources for enhanced care planning

Work smarter with the Aledade App.

The Aledade App is helping independent primary care practices just like yours deliver better care, more effectively, while capturing missed revenue opportunities. Discover how the App can do the same for your practice.
